

Outreach Handoff — Quality Tooling, LLC

Prepared 2026-07-24 · Concept approved by Braden · Site live & auto-syncing weekly

The one-liner

Family machine shop in Moultrie with a thriving Etsy metal-art business (7,300+ sales) whose current Wix site shows only a fraction of what they sell. We built them a complete redesign that mirrors their full Etsy catalog with live prices — and it updates itself from Etsy automatically every week. It's already built; they just have to want it.

Who to talk to

Person	Role	Why they matter
Jennifer	Designer, customer service; runs the metal-art department AND the Etsy shop	Start here. The website is about the metal-art side of the business — it's her domain, and she writes all the shop copy.
John	Owner (founded the shop in 1985)	Final say. The "man with the dream" per the family's own bio.
Janice	Co-Owner	Founded it alongside John.

Family texture for rapport (from their own Etsy bio): John & Janice started the shop in 1985 behind their single-wide trailer; all three kids (Jonathan, Timothy, Jennifer) work in the business today, plus four employees. Faith and family feature prominently in how they tell their story — they're proud of the humble-beginnings arc. Timothy runs the CNC/laser machines.

Contact details

- **Phone:** (229) 324-2124
- **Email:** quality_tooling@windstream.net
- **Address:** 315 Wesley Chapel Rd, Moultrie, GA 31788
- **Original website:** <https://www.qualitytoolingllc.com> (Wix)
- **Our concept site:** <https://quality-tooling.vercel.app> <- the ONLY link you ever send
- **Etsy:** <https://www.etsy.com/shop/QualityToolingLLC> · **FB:** @QualityToolingLLC · **IG:** @quality_tooling_llc

Never send any factory-sites-bo-n.vercel.app URL. That's the internal directory with other prospects' work on it. The prospect sees quality-tooling.vercel.app and nothing else.

What we built — selling points, strongest first

1. **Their complete catalog, always current.** 151 products with photos and live prices, every card linking straight to its Etsy listing. Checkout stays on Etsy — nothing about how they sell changes, their site just finally shows everything they make.

2. **Automatic weekly Etsy sync.** Prices, photos, new products, and sold-out removals flow from Etsy to the website with no work from them, ever. The site cannot go stale. (Their current site is hand-maintained and shows a fraction of the shop.)
3. **Proof point from our first sync:** their Etsy shop had **15 products their website never showed** — pool towel hooks, patina letters, garden flags, seasonal stakes. We found them automatically and they're on the concept site now.
4. **Instant product search.** Type "nativity" or "monogram" anywhere on the site and every matching product appears with its price. Their current site can't do this.
5. **A design that's actually theirs.** Cream/navy/orange identity, serif display type, custom iconography — built around their story, not a Wix template. Feels like a brand, not a page.
6. **Fast everywhere.** Hand-built static pages, QA'd on phone/tablet/desktop. Loads near-instantly on a phone in a shop yard — no Wix bloat.
7. **Nothing lost.** Every page of their current site exists in the redesign: services, art shop, gallery, customer feedback, gift cards, every product category.
8. **Zero-risk launch.** They keep their domain and their Google ranking — we have a documented SEO-safe cutover (301s for every old URL, search-console handoff). Days, not weeks.

Suggested demo flow (60 seconds)

1. Open **quality-tooling.vercel.app** — let the homepage land.
2. Click **Full Catalog** — scroll the 151-product wall with sections and prices.
3. Use the **search** — type "sun" -> pool signs with prices appear instantly.
4. Click any product -> it opens their real Etsy listing. "Your shop, your checkout — the site just finally keeps up with it."
5. Say: "This updates itself from your Etsy every Monday morning. You never touch it."

Honest answers to likely questions

- **"We already have a website."** -> This is your website, upgraded: same pages, same content, plus your whole catalog, search, and it maintains itself.
- **"How much work is this for us?"** -> None. Etsy stays your single source of truth; the site follows it automatically. You keep listing on Etsy exactly like today.
- **"Will we lose our Google ranking?"** -> No — you keep your domain; we 301-map every old URL and hand Google the new sitemap. The plan is written down before we touch anything.
- **"What about our digital files / t-shirts on Etsy?"** -> Deliberately excluded so the site stays a clean showcase of the metal work; easy to include if they want them.

Cautions

- The concept site is intentionally **hidden from Google** (noindex) while it's a private pitch — that's a feature, mention it if they ask why they can't google it.
- Prices on the concept refresh weekly (last sync 2026-07-24) — they'll always match Etsy within a few days, but don't quote a price as gospel in the meeting; click through to Etsy.
- Don't promise pages their current site doesn't have (we mirror their structure on purpose).
- Don't reference any other business's concept site.

If they say yes — connecting their domain (they're on Wix)

The thing to say in the room: **"You keep your domain. Nothing gets transferred or bought. It's a ten-minute settings change in your Wix account, we do it together on a screen-share, and your old site stays up until the new one is verified live."**

How it actually works, in order:

1. **We prep the site for launch first** (our side, before touching DNS): remove the noindex/robots blocks, add sitemap + redirects per the launch checklist in CLAUDE.md.
2. **We add their domain to the Vercel project** (Settings -> Domains -> add qualitytoolingllc.com and www). Vercel then displays the exact two DNS records it wants.
3. **In their Wix account** (they log in; screen-share): **Domains -> qualitytoolingllc.com -> Advanced -> Edit DNS**, then:
 - change the **A record** for @ to the IP Vercel displayed (currently 76.76.21.21 — always use what Vercel shows, not this doc),
 - change the **CNAME** for www to cname.vercel-dns.com. That's the whole change. Wix will warn that the domain is being pointed away from the Wix site — that's expected; click through it.
4. **Wait for propagation** (minutes to a few hours, worst case 48h). Vercel issues the SSL certificate automatically once it sees the records. Old Wix site keeps serving until then — zero downtime.
5. **Verify + clean up**: we confirm the live domain, redirects, and Google Search Console. Then they can downgrade/cancel their **Wix site plan** (the monthly website fee). If the domain is *registered* at Wix, they keep that small annual registration fee with Wix — that's normal and fine.

Notes for likely follow-ups:

- **Email is unaffected.** Their business email is quality_tooling@windstream.net — not tied to the domain at all. (And even for domain email, we'd only touch A/CNAME records, never MX.)
- **If the domain turns out to be registered elsewhere** (GoDaddy etc.) and just connected to Wix: same two records, edited at that registrar instead. Nothing else changes.
- **Optional, later, never required for launch**: moving the domain registration away from Wix entirely (Wix -> Domains -> Advanced -> Transfer away from Wix; they unlock it, get an auth code, and the new registrar pulls it in ~5–7 days; ICANN blocks transfers within 60 days of registration/renewal). Only worth it if they want to stop dealing with Wix altogether.
- Timeline end to end: **1–2 days**, most of it DNS propagation and verification. Expect a brief, normal ranking wobble while Google recrawls; equity carries over per the checklist.
